(57) Abstract :  
The present invention a hybrid crafting equipment comprises of, a plug-in craft equipment detection, and specifically discloses a craft equipment system and a missing-proof and error- proof detection method thereof. The system includes plug-in craft equipment, a PCB A board arranged on the plug-in craft equipment, a board card connected with the plug-in craft equipment and a displayer connected with the board card. The plug-in craft equipment sends signals after detection to the board card, the board card feeds back the same to the displayer, and then the displayer carries out visual reminding for a position point of missing insertion or reverse insertion on the basis of Lab view programming. The problem that currently occurrence of manual error operations cannot be effectively prevented from a single angle of mechanical structures is solved, visual error reporting and reminding are realized, anomaly troubleshooting can be carried out according to a display interface of the displayer, an intelligence degree is high, and production efficiency is improved.
