B) Report

i. Title: Guest lecture on Vermi-composting Awareness

ii. Introduction:

We know very well that Earthworms consume the natural things like leaves; plant remains etc and produce the natural fertilizer. This natural fertilizer can be used for the growth of crop/ plants. This vermiculture technology is the scientific process of biofertilizers production from plant and other biodegradable wastes for betterment of human being. Earthworm can be reared scientifically for composting organic waste into valuable nutrient fertilizer- vermicompost and the technology is vermitechnology. The vermicompost is the excreta of earthworms rich in humas, better than cow dung or farm yard manure. It is non toxic ecofriendly and found to be good for plant and crop growth which boosts the production after its use. The vermin technology also plays key role in eco-friendly management of ecosystem.

iii. Objectives of the Programme / issues addressed:

- To upgrade the practical knowledge in Vermicomposting.
- To inculcate the vermin-technology technique among students.
- To give the stepwise details of earthworm and vermicomposting unit management and enhance the students enterpruinship in Vermi-technology.

iv. Details of Participants:

About 71 participants like teachers, students were present for guest lecture. Which of these 53 were female participants and 18 were male participants

v. Brief Summary of Events/ Sessions:

This lecture was very much fruitful as Shri Dr. R.P. Mali principal Indira Gandhi Mahavidyalaya cidcco ,Nanded informed all the details regarding the use of vermicomposting for organic farming for good health. He also focused on the management vermin-composting small unit in farm or elsewhere. Students were satisfied by the procedure applied in vermitechnology, maintenance of moisture, packing, labeling of fertilizer and marketing etc.

vi. Conclusion, with Feedback on the Programme:

He interacted with students and answers their questions.
