## PROJECTS

### Class Management

This project is aimed at providing an economically feasible security and communication system that will provide very good features that can fulfill the security needs of a small organization. The project will be supposed to implement the storage of products so that a large collection could be maintained with minimum storage space. This project will also be able to provide reports of products sold to the customer and brought to the store.

### Blood test Report Analysis

Developed an application for providing easier reports of urine and blood test that will be easily understandable reports by patients with consultation
