SEMESTER PATTERN

(W.e.f. Academic Year 2018-19)

SYLLABUS FOR

B.Sc. II (Fishery Science)

Year 2018-19

RAJARSHI SHAHU MAHAVIDYALAYA,(AUTONOMOUS), LATUR.
SEMESTER PATTERN CURRICULUM UNDER CHOICE BASED CREDIT SYSTEM (CBCS)
Faculty of Science B.Sc. T.Y.
SUBJECT: Fishery Science
w.e.f - 2018

Semester	Course Number		Paper No. and Title	Total period /week	Marks		Credits
					Internal	External	
SEM-V	CCF-IX	A	Fish Microbiology, Pathology and Immunology	45 3/week	20	30	2
		B	Fish Genetics, Biodiversity and conservation, Fisheries act and Regulation	45 3/week	20	30	2
	CCFP VII	A	Lab Course-VII	45 3/week	20	30	2
	CCFP VIII	B	Lab Course-VIII	45 3/week	20	30	2
	SECF-IV		Fish biotechnology and Bioinformatics	3/Week	20	30	2
SEM-VI	CCF-X	A	Aquaculture engineering and Technology	45 3/week	20	30	2
		B	Fish Economics, Marketing, Fisheries Extension and Statistics	45 3/week	20	30	2
	CCFP-IX	A	Lab Course -IX	45 3/week	20	30	2
	CCFP-X	B	Lab Course-X	45 3/week	20	30	2
	SECF-IV		Entrepreneurship development and Communication skills	3/Week	20	30	2

RAJARSHI SHAHU MAHAVIDYALAYA, (AUTONOMOUS) LATUR.
B.Sc. T.Y. (Fifth Semester)
Subject: FISHERY SCIENCE
Paper IX: Fish Microbiology, Pathology and Immunology
Course Code: CCF-9

SECTION A

Marks – 50

Hours 45

Credits – 2

Objectives

- The course is designed to give a basic understanding on the fundamental aspects of microbiology to diseases caused by various groups of microorganisms.
- The students will be introduced to the microbial world, the structure and significance of bacteria, fungi, algae, protozoa and viruses.
- On completion of the course the students are expected to have a clear understanding on microscopy, sterilization, disinfection, bacterial cultivation techniques, their growth dynamics, metabolic processes, to meet these needs focus will be given on microbial instrumentation their structure handling and principle.
- The students are also introduced to the beneficial and harmful manifestations of microorganisms especially of bacteria and their role in microbial mineralization and disease processes.
- In addition, basic aspects of immunology and Compounds that modulate the immune system in fish are also introduced to the students.

(All these are to be accomplished through formal lectures, class room discussions and the students will be assessed by examinations.)

Course outcome:

- Gain a heightened understanding of the various microbiological diseases caused by various groups of microorganisms.
- Have an increased understanding of understanding on microscopy, sterilization, disinfection, bacterial cultivation techniques, their growth dynamics, metabolic processes,
- Have an increased understanding of Innate and adaptive immunity in teleost fish
- Have an increased understanding of Changes during fish spoilage – Rigor mortis.

Unit – I

Microbiology

- 1) General account of harmful and useful micro-organisms in fresh water and marine water.
- 2) Fish spoilage - Causes of fish spoilage – Bacterial, enzymatic and chemical spoilage.
- 3) Changes during fish spoilage – Rigor mortis.
- 4) Chemical test for freshness.
- 5) Organoleptic test for freshness.
- 6) Sources of contamination of fish.

Unit – II

Microbiological tools and techniques.

- 1) Hot air oven
- 2) Autoclave
- 3) Incubator
- 4) Centrifuge machine
- 5) Colorimeter
- 6) pH meter
- 7) Colony counters
- 8) Microscopes
- 9) Safety in Laboratory

Unit – III

Fish Pathology

(Disease causing organism, symptoms and preventives Measures).

- 1) Fungal Diseases: Gill rot, Branchiomycosis.
- 2) Bacterial Diseases: Dropsy and fin rot
- 3) Protozoan Diseases: White spot and costiasis.
- 4) Helminth diseases: Gyrodactylosis and Dactylogyrosis.
- 5) Crustacean Diseases: Lerniasis and argulosis.
- 6) Viral Diseases: WSSV, SVCV

Unit – IV

Innate and adaptive immunity in teleost fish

1. Introduction
2. Ontogeny of the immune system
3. Lymphoid organs
 - 3.1. Thymus
 - 3.2. Kidney
 - 3.3. Spleen
4. Cells involved in immune response
5. Nonspecific immunity

- 5.1. Physical barriers
- 5.2. Nonspecific cellular cytotoxicity
- 5.3. Antimicrobial peptides
- 5.4. Phagocytosis
- 5.5. Complement
- 5.6. Tumor necrosis factor (TNF)
- 5.7. Interferon (INF)
- 5.8. Interleukins (IL)
- 5.9. Others cytokines and chemokines
 - 5.10. Protease inhibitors
 - 5.11. Lysozyme
 - 5.12. Natural antibodies
 - 5.13. Pentraxins
 - 5.14. Transferrin
6. Specific immunity
 - 6.1. Antibodies
 - 6.2. Immunological memory
 - 6.3. Cellular cytotoxicity
 - 6.4. Cytokines involved in adaptive immunity
7. Environmental effect on immune response
8. Compounds that modulate the immune system in fish
 - 8.1. Nucleotides
 - 8.2. Glucans
 - 8.3. Probiotics

RAJARSHI SHAHU MAHAVIDYALAYA, (AUTONOMOUS) LATUR.

B.Sc. T.Y. (Fifth Semester)

Subject: FISHERY SCIENCE

Paper X: Fish Genetics, Biodiversity and conservation, Fisheries act and Regulation

Course Code: CCF-10

Marks – 50

Hours 45

Credits – 2

Objectives

- Enable students to understand basic concept Principles of Fish Genetics and Biotechnology
- Enable students to understand principal and techniques of Chromosomal engineering
- Enable students to understand Biodiversity and conservation fishes in India.
- Enable students to understand Indian Fisheries Act strategies for exploitation of deep sea & Shore fisheries.

Course outcome

- Have an increased understanding of Principles of Fish Genetics and Biotechnology.
- Have an increased understanding of Chromosomal engineering.
- Have greater insight into how genes transfer from one generation to other.
- Understand what is the mechanisms of Production of Monosex super male and female by hormonal and sex reversal technique.
- Have an increased understanding of fish biodiversity and its importance
- Have an increased understanding of various fishing act.

Unit- I

Principles of Fish Genetics and Biotechnology

1. Fish Genetic (Germ Plasm) Resources
2. Chromosomes and Genes.
3. Karyotyping
4. Cryopreservation of gametes (Gene banking)
5. Sex determination
6. Monosex culture
7. Sterile fish

Unit -II

Hybridization

1. Hybridization in Indian Carps
2. Intra Specific and Intergenic hybrids
3. Natural Hybridization
4. Important hybrids
5. Inbreeding, cross breeding and selective breeding
6. Application of hybridization in fisheries 20

Chromosomal engineering

1. Genome

2. Gynogenesis
3. Androgenesis
4. Polyploidy (Triploids or Broiler fish)
5. Production of Monosex super male and female by hormonal and sex reversal technique.

Unit -III

Biodiversity and conservation fishes in India.

Endangered fishes of India and world.

Unit -IV

- 1) Indian Exclusive economic zone (EEZ).
- 2) Indian Fisheries Act strategies for exploitation of deep sea & Shore fisheries.
- 3) Organization setup of fisheries sector of states, central level

RAJARSHI SHAHU MAHAVIDYALAYA, (AUTONOMOUS) LATUR.
B.Sc. T.Y. (Fifth Semester)
Subject: FISHERY SCIENCE
Lab Course VII (Course Code: CCFP-7)
(Based on Paper IX – Paper IX: Fish Microbiology, Pathology and Immunology)

Marks – 50

Hours 30

Credits – 2

Objectives

- The laboratory practical course is designed to give a basic understanding on the fundamental aspects of microbiology to diseases caused by various groups of microorganisms.
- Enable students to understand the microbial world, the structure and significance of bacteria, fungi, algae, protozoa etc
- Enable students to understand the beneficial and harmful manifestations of microorganisms
- In addition, basic aspects of immunology and Compounds that modulate the immune system in fish are also introduced to the students.

Course outcome:

At the end of this course, students should be able to

- Students enable to understand the various microbiological diseases caused by various groups of microorganisms.
- Students enable to understand to handle microscopy and learn the techniques of sterilization, disinfection, bacterial cultivation techniques, their growth dynamics, metabolic processes.
- Students enable to understand Staining techniques viz- monochrome staining and gram staining.
- Students enable to Isolate of microorganisms from water.
- Students enable to Inhibit and destruct microorganisms by heat.
- Students enable to understand Titration of plaque-forming Bacteriophage
- Students enable to understand Blood analysis of fishes and Treatment of fishes by using different methods

Practicals:

1) Study of Basic Microbiological Tools (structure and use)

- a. Hot air oven
- b. Autoclave
- c. Incubator
- d. Centrifuge machine
- e. Colorimeter
- f. PH meter
- g. Colony counter
- h. Compound microscope

2) Study of disease causing agents in fishes.

- 3) Isolation of microorganisms (Bacteria and fungi) from fish (Streak plate method)
- 4) Staining - monochrome staining and gram staining.
- 5) Identification of fresh fishes and spoiled fishes.
- 6) Isolation of microorganisms from water
- 7) Environmental distribution of bacteria
- 8) Inhibition and destruction of microorganisms by heat.
- 9) Bacterial exoenzymes.
- 10) Measurements of bacteria
- 11) Titration of plaque-forming Bacteriophage.
- 12) Treatment of fishes by using different methods
- 13) Blood analysis of fishes.

RAJARSHI SHAHU MAHAVIDYALAYA, (AUTONOMOUS) LATUR.

B.Sc. T.Y. (Fifth Semester)

Subject: FISHERY SCIENCE

Lab Course VII (Course Code: U – FIS-580)

Marks – 50

Hours 30

Credits – 2

Objectives

- Enable students to understand basic Principles of Fish Genetics and Biotechnology
- Enable students to understand principal and techniques of Chromosomal engineering
- Enable students to understand Biodiversity and conservation fishes in India.
- Enable students to understand Indian Fisheries Act strategies for exploitation of deep sea & Shore fisheries.

Course outcome:

At the end of this course, students should be able to

- Students enable to understand Collection and observation of gametes from fresh water fishes locally available
- Students enable to understand erythrocyte measurements for polyploidy evaluation.
- Students enable to understand Cryopreservation techniques.
- Students enable to Determine of hybrids in different fishes.
- Students enable to understand the concept of Androgenesis and Gynogenesis so as they can produce broiler fishes.
- Students enable to understand endangered fishes of India. And world hence will be sure step up to conserve it.

Pacticals:

- 1) Collection and observation of gametes from fresh water fishes
- 2) Polyploidy evaluation using erythrocyte measurements
- 3) Cryopreservation of gametes
- 4) Chromosome karyotyping
- 5) Sex determination in fin-fishes and shell-fishes
- 6) Determination of hybrids in major carps (Rohu - catla hybrid)
- 7) Study of Androgenesis and Gynogenesis.
- 8) Study of endangered fishes of India and world.
- 9) Identify and Describe Triploid and Broiler fish.

RAJARSHI SHAHU MAHAVIDYALAYA, (AUTONOMOUS) LATUR.

B.Sc. T.Y. (Sixth Semester)

W.e.f. June 2019

Subject: FISHERY SCIENCE

Paper XI: Aquaculture Engineering and technology

(CCF-11)

Marks – 50

Hours 45

Credits – 2

Objectives

1. Provide students with necessary skills for designing aquaculture system;
2. Enable students to design, construct and maintain fish farms;
3. Provide student with the requisite knowledge of pond construction engineering;
4. Enable students to design water pumps for different aquaculture systems;
5. Enable students to design and construct fish cages, tanks and other fish enclosure structures;
6. Provide students with opportunities to develop fish farm construction skills;
7. Provide students with skills to design aerators and filters for aquaculture systems
8. Provide students with the skills to design and construct water re-circulatory systems;
9. Enable students to manage waste in aquaculture production systems.

Course outcome

At the end of this course, students should be able to

- Students enable to understand The farm: technical components in a system
- Students enable to understand Land-based hatchery and juvenile production farms and their structure.
- Students enable to understand Instrumentation and Monitoring.
- Students enable to understand to handle Instruments for measuring physical conditions
- Students enable to understand hydraulics and Water Transport system.
- Students enable to understand design and construct water re-circulatory systems in and around the aquaculture farms.

UNIT-I

1. Aquaculture engineering

Introduction

1.1 Aquaculture engineering

1.2 Classification of aquaculture

1.3 The farm: technical components in a system

1.3.1 Land-based hatchery and juvenile production farm

1.3.2 On-growing sea cage farm

1.4 Future trends: increased importance of aquaculture engineering

2. Instrumentation and Monitoring

1 Introduction

2 Construction of measuring instruments

3 Instruments for measuring water quality

3.1 Measuring temperature

3.2 Measuring oxygen content of the water

3.3 Measuring pH

3.4 Measuring conductivity and salinity

3.5 Measuring total gas pressure and nitrogen saturation

3.6 Other

4 Instruments for measuring physical conditions

4.1 Measuring the water flow

4.2 Measuring water pressure

4.3 Measuring water level

5 Equipment for counting fish, measuring fish size and estimation of total biomass

5.1 Counting fish

5.2 Measuring fish size and total fish biomass

6 Monitoring systems

6.1 Sensors and measuring equipment

6.2 Monitoring center

6.3 Warning equipment

6.4 Regulation equipment

6.5 Maintenance and control

UNIT-II

3. Water Transport

1 Introduction

2 Pipe and pipe parts

1 Pipes

2 Valves

3 Pipe parts – fittings

4 Pipe connections – jointing

5 Mooring of pipes

6 Ditches for pipes

3 Water flow and head loss in channels and pipe systems

- 3.1 Water flow
- 3.2 Head loss in pipelines
- 3.3 Head loss in single parts (fittings)
- 3.4 Pumps
 - 3.4.1 Types of pump
 - 3.4.2 Some definitions
 - 3.4.3 Pumping of water requires energy
 - 3.4.4 Centrifugal and propeller pumps
 - 3.4.5 Pump performance curves and working point for centrifugal pumps
 - 3.4.6 Change of water flow or pressure
 - 3.4.7 Regulation of flow from selected pumps

UNIT-III

4. Design and Construction of Aquaculture Facilities

- 4.1 Introduction
- 4.2 Land-based hatchery, juvenile and on-growing production plant
 - 4.2.1 General
 - 4.2.2 Water intake and transfer
 - 4.2.3 Water treatment department
 - 4.2.4 Production rooms
 - 4.2.5 Feed storage
 - 4.2.6 Disinfection barrier
 - 4.2.7 Other rooms
 - 4.2.8 Outlet water treatment
 - 4.2.9 Important equipment.
- 4.3 On-growing production, sea cage farms.
 - 4.3.1 General.
 - 4.3.2 Site selection.
 - 4.3.3 The cages and the fixed equipment.
 - 4.3.4 The base station.
 - 4.3.5 Net handling.
 - 4.3.6 Boat

UNIT-IV

5. Recirculation and Water Re-use Systems

- 5.1 Introduction
- 5.2 Advantages and disadvantages of re-use systems
 - 5.2.1 Advantages
 - 5.2.2 Disadvantages of re-use systems
- 5.3 Definitions
 - 5.3.1 Degree of re-use
 - 5.3.2 Water exchange in relation to amount of fish
 - 5.3.3 Degree of purification
- 5.4 Theoretical models for construction of re-use systems
 - 5.4.1 Mass flow in the system

5.4.2 Water requirements of the system

5.4.3 Connection between outlet concentration, degree of re-use and effectiveness of the water treatment system

5.5 Components in a re-use system

5.6 Design of a re-use system

Referance Book:

1.Fundamentals of Aquacultural Engineering Lawson, Thomas Chapman ^ Hall. Inc. NY.

2.Aquacultural Engineering. (Dchapt 12, 13, 15). Wheaton, F.W. John Wiley & Sons, N.Y.

Subject: FISHERY SCIENCE

Lab Course IX (Course Code: CCFP-9)

Marks – 50

Hours 30

Credits –2

Objectives

- Provide students with necessary skills for designing aquaculture system;
- Enable students to design, construct and maintain fish farms;
- Provide student with the requisite knowledge of pond construction engineering;
- Enable students to design water pumps for different aquaculture systems;
- Enable students to design and construct fish cages, tanks and other fish enclosure structures;
- Provide students with opportunities to develop fish farm construction skills;
- Provide students with skills to design aerators and filters for aquaculture systems
- Provide students with the skills to design and construct water re -circulatory systems;
- Enable students to manage waste in aquaculture production systems.

Course outcome

At the end of this course, students should be able to

- Students enable to understand Evaluation of potential site for aquaculture.
- Students enable to determine the Pace Value & the distance between two given points
- Students enable to find the bearing of different objects and to convert WCB to RB.
- Students enable to understand To measure and plot the distances of various field objects by radial method
- Students enable to analyze Soil for farm construction.
- Students enable to understand the Calculation of the Flow Rate for a Given Pipe Diameter, Pressure, & Length.
- Students enable to Estimate the horse power and selection of ideal pumps.
- Students enable to understand various aqua cultural accessories

1. Evaluation of potential site for aquaculture

2. **Chain surveying:** To determine the Pace Value & the distance between two given points.

3. **Compass Survey.** To find the bearing of different objects and to convert WCB to RB.

4. **Plane table and leveling.**

- To measure and plot the distances of various field objects by radial method.

5. **Simple Leveling:** To determine the level difference between the given points.

6. Soil analysis for farm construction.

7. Familiarization with various survey equipments.
8. Estimation of water requirements.
9. Calculate the Flow Rate for a Given Pipe Diameter, Pressure, & Length
10. Water purification methods.
11. Estimation of horse power and selection of ideal pumps.
12. Familiarization with various aqua cultural accessories.
13. Visits to different types of: Freshwater fish/prawn farms/Visits to different types of :
Estuarine fish / shrimp farms/Visits to different types of : Fresh water fish / prawn hatcheries.
/Visits to different types of : Marine fish /shrimp hatcheries

Subject: FISHERY SCIENCE

Paper XII: Fish Economics, Marketing, Fisheries Extension and Statistics

Course Code : CCF-12

Marks – 50

Hours 45

Credits – 2

OBJECTIVES

- Enable students to identify different marketing channels and intermediaries involved therein and their roles in fish marketing,
- Enable students to exchange and circulate information, ideas and practical experience on all matters relating to fisheries and their management.
- Enable students to learn structure of fish market to meet the local, specialist and overall needs of fisheries interests.
- Enable students to identify different marketing channels and intermediaries involved therein and their roles in fish marketing.
- Enable students to learn Extension

Course outcome

At the end of this course, students should be able to

- Students enable to understand Economic Terminology
- Students enable to understand Demand and Supply of Fish
- Students enable to understand Elasticity of Demand.
- Students enable to understand marketing channels and intermediaries involved.
- Students enable to understand Nature of fisheries extension
- Students enable to understand Collection and organization of data, Construction of frequency tables and the criteria governing formulations of good table.

Unit I

1. Fish Economics

Economic Terminology

1. Scarcity
2. Choice
3. Scale of Preference
4. Definitions in Economics
5. Macro-Economic Tools
6. Economic Systems
7. Market Economy
8. Disadvantages of market economy
9. Planned economy
10. Mixed economic systems

2. Functions of an economic system

Aquaculture economics

Unit II

Demand and Supply of Fish

Introduction

a) Consumer Demand

1. Demand Schedule
2. Demand Curve
3. Demand and quantity demanded
4. Factors affecting the demand for fish and fish products
5. Population size and distribution
6. Consumer income and distribution
7. Prices and availability of substitutes
8. Consumer tastes and preferences

b) Elasticity of Demand

1. Price elasticity of demand
2. Calculation of own Price elasticity of demand
3. Determinants of price elasticity
4. Income elasticity
5. Cross-price elasticity
6. Elasticity, total and marginal revenue
7. Producer supply
8. Elasticity of supply
 - a) Price elasticity supply
 - b) Calculating supply elasticities
 - c) Price flexibilities
 - d) Short and long run supply curves
9. Competitive market equilibrium

C) Fish Marketing

1. Introduction

2. Traditional and modern fish marketing
3. Fish trade on micro and macro levels
4. Selling procedure for fish in India
5. Cost marketing and differential prices
6. Strategic fish marketing
7. Intensive growth
8. Diversification of growth

Unit III

Management and Extension

1. Nature of fisheries extension
2. fisheries extension and traditional management
3. Extension and co-operative development
4. Role of co-operative development in fisheries
5. Fisheries extension system India problems.
6. Future of fisheries extension
7. Communication and flow of information
8. Techno Socio-economic problem of fishermen
9. Role of women in fisheries
10. Need of technical knowledge to fishermen

Unit IV

Statistics

1. Definition and scope of statistics
2. Collection and organization of data
3. Representation of data by graphs, charts and diagrams
4. Classification of data according to attributes and class intervals
5. Construction of frequency tables and the criteria governing formulations of good table
6. Methods of computing mean, median and mode of grouped and ungrouped data

Reference Book

Subject: FISHERY SCIENCE

Lab Course X (Course Code: CCFP-10)

(Based on Paper XII - Fish Economics, Marketing, Fisheries Extension and Statistics)

Marks – 50

Hours 30

Credits – 2

Objectives

- Enable students to identify different marketing channels and intermediaries involved therein and their roles in fish marketing,
- Enable students to exchange and circulate information, ideas and practical experience on all matters relating to fisheries and their management.
- Enable students to learn structure of fish market to meet the local, specialist and overall needs of fisheries interests..
- Enable students to learn Extension.

Course outcome:

At the end of this course, students should be able to

- Students enable to understand and evaluate Economics of pond culture and riverine fisheries.
- Students enable to understand Field level data collection, tabulation, analysis and Report writing.
- Students enable to understand Study of organizational structure and their role in fisheries.
- Students enable to understand socio-economic conditions of fishermen of local market and villages.
- Students enable to understand Preparation of Radio talks even they able to deliver radio lecture.
- Develop the skills of to take Interview of fish farmers.
- Students enable to understand statistical calculation viz.mean ,mode,median and also can be expert in Graphical representation of given data.

1. Economics of pond culture and riverine fisheries

2. Field level data collection, tabulation, analysis and Report writing

(Inland fishery catch from nearby villages)

3. Study of organizational structure and their role in fisheries viz.

a) Fishermen co-operative society

b) FFDA (fish farmer's development Agency)

c) State and central Government organization i.e. ministry of fisheries.

d) Fish processing unit any four

- 4.** Study of socio-economic conditions of fishermen from near By villages
- 5.** Preparation of extension material like pamphlets, leaflets and posters.
- 6.** Preparation of Radio talks
- 7.** Participation in Exhibitions
- 8.** Interview of fish farmers: A detailed project of the above cited areas should be submitted at the time of examination.
- 9.** Determination of mean, mode, median from given data.
- 10.** Graphical representation of given data.
- 11.** Determination of per hectare income.

Subject: Fishery Science

Skill Enhancement Course

Entrepreneurship Development and Communication Skills

Course Code: SEC-IV

Marks – 50

Hours 30

Credits – 2

UNIT I

- Entrepreneurship Development: Assessing overall business environment in the Indian economy.
- Overview of Indian social, political and economic systems and their implications for decision making by individual entrepreneurs.
- Globalisation and the emerging business / entrepreneurial environment.

UNIT II

- Concept of entrepreneurship; entrepreneurial and managerial characteristics; managing an enterprise; motivation and entrepreneurship development; importance of planning, monitoring, evaluation and follow up; managing competition; entrepreneurship development programs; SWOT analysis, Generation, incubation and commercialization of ideas and innovations.
- Government schemes and incentives for promotion of entrepreneurship.

UNIT III

- Government policy on Small and Medium Enterprises (SMEs) / SSIs.
- Export and Import Policies relevant to fisheries sector.
- Venture capital. Contract farming and joint ventures, public-private partnerships.
- Overview of fisheries inputs industry.
- Characteristics of Indian fisheries processing and export industry.

UNIT IV

- Social Responsibility of Business. Communication Skills: Structural and functional grammar; meaning and process of communication, verbal and non-verbal communication; listening and note taking, writing skills, oral presentation skills; field diary and lab record; indexing, footnote and bibliographic procedures.
- Reading and comprehension of general and technical articles, pr 聞 is writing, summarizing, abstracting; individual and group presentations, impromptu presentation, public speaking; Group discussion.
- Organizing seminars and conferences.
