Head, Dept of Physics  
Rajarshi Shahu Mahavidyalaya, Latur.

Subject: - **Invitation to the meeting with NAAC Peer Team.**

Respected sir,

It gives me an immense pleasure to inform you that NAAC Peer Team is scheduled to visit our college on 3<sup>rd</sup> and 4<sup>th</sup> August 2022 for assessment. The team is going to have academic dialogue with IQAC members. Hence you are kindly invited for the meeting with honourable NAAC Peer Team on dated 03/08/2022 at 11.00 am. Kindly accept our invitation and arrange to attend for academic dialogue with the NAAC Peer Team.

Thanking you.

#### Abstract:

Copper Sulphide (CuS) thin films deposited on glass substrates by the Chemical Bath Deposition technique. Copper Sulphide for copper and Thiourea for sulfur were used as sources for Copper and Sulphur ions respectively. Effect of bath temperature concerning the assets of copper sulphide films was studied. Optical characterization was done by using a UV- VIS spectrophotometer in the wavelength range of 200 nm to 1100 nm. Transmittance, absorbance and band gap were calculated. Band gap energy range was found in between 2.25 eV to 2.34 eV and these consequences that the films can appropriately be castoff in the formation of solar cells. XRD studies long-established that the thin films had hexagonal structure and confirmed the excellence of crystallinity of the films by acquisitive the bath temperature. Surface roughness, thickness of the films and grain size were also improved with increasing of bath temperature from 50 and 55 °C. However, the samples deposited at 55 °C showed comparable and uniform structure giving to SEM and EDAX pictures. Electrical transport readings exhibited that the films are semiconducting in nature. Highest room temperature electrical conductivity of  $6.37 \times 10^{-3}$  to  $8.34 \times 10^{-3} (\Omega\text{-cm})^{-1}$  was observed for the films. Thermo power extents indicated similar manner of variations corresponding to the electrical conductivity and that the samples show n-type conduction. The bath temperature was one of the key deposition parameters that control the possessions of semiconductor thin films.

**Keywords:** CBD technique, XRD studies, SEM and EDAX, semiconductor thin films.
